

**“REVEALED: How To ‘Hack’
A Popular Forex Indicator
And *Squeeze* Every Last Pip
Out Of The Market ...Now!”**

I'm going to keep this short...

Why is it that 95% of traders lose?

It's really very simple... because the 95% all act like a herd of "sheep"
...and they all use the same charts and indicators.

But I'm going to show you something. Something very special.

I'm Going To Show You How To "Hack" An Indicator

...and how to use it until your *broker* is begging you for mercy!

Here's the deal...

We're going to talk about the MACD indicator.

Now, most people use this indicator for divergence trading.

However, as we both know, the money is in *riding the trend* – so we need to do something different.

What we want to do is take the MACD and take it to its absolute limits!

I'm deadly serious here.

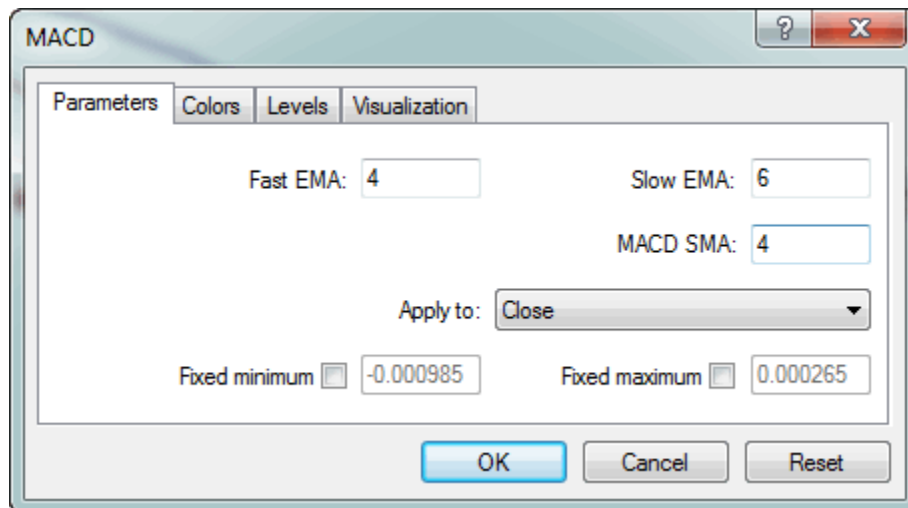

Usually, the MACD uses higher values such as the "classic" 12,26,9 configuration.

What we're going to do is take the MACD and turn it into...

A Lightning-Fast, Tricked-Up Tool To Slingshot You Into High-Probability Trades!

Instead of the super-slow 12,26,9 settings on the MACD ...you enter 4,6,4.

If you use Metatrader4™ – then you should set your MACD configuration like this:

With this setup you're going to be catapulted into rocket-ship style trades like this:

I can't reveal too much about this "hack" as it is unfair to the lucky traders who have managed to get their hands on a copy of FX Pip Sniper.

FX Pip Sniper is the *EXCLUSIVE* trading method that reveals – step-by-step – how to trade the MACD(4,6,4) for consistent returns.

If you're ready to finally take your trading SERIOUSLY – then I'm talking to ***you***.

P.S. – I'm not sure how long FX Pip Sniper is going to be available for ...to "lock in" your copy you need to click the above link RIGHT NOW!

Trading Foreign Exchange carries a high level of risk and may not be suitable for all investors. There is a possibility that you could sustain a loss of all or more of your investment therefore you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with Foreign Exchange trading. This website, Mass Pip Profits, and anyone associated with it, cannot be held responsible for any losses incurred. Trading foreign currencies is a challenging and potentially profitable opportunity for educated and experienced investors. However, before deciding to participate in the foreign equity market, you should carefully consider your investment objectives, level of experience and risk appetite. Most importantly, do not invest money you cannot afford to lose. There is considerable exposure to risk in any off-exchange foreign exchange transaction, including, but not limited to, leverage, creditworthiness, limited regulatory protection and market volatility that may substantially affect the price, or liquidity of a currency or currency pair. Moreover, the leveraged nature of foreign equity trading means that any market movement will have an equally proportional effect on your deposited funds. This may work against you as well as for you. The possibility exists that you could sustain a total loss of initial margin funds and be required to deposit additional funds to maintain your position. If you fail to meet any margin requirement, your position may be liquidated and you will be responsible for any resulting losses. To manage exposure, employ risk-reducing strategies such as 'stop-loss' or 'limit' orders. There are risks associated with utilizing an Internet-based trading system including, but not limited to, the failure of hardware, software, and Internet connection. This website, Mass Pip Profits, and anyone associated with it, cannot be held responsible for communication failures or delays when trading via the Internet.
